Internal gear pumps

Internal gear pump

Type EIPH2 high pressure pump with constant displacement volume

EIPH2

Characteristics

- Internal gear pump with axial and radial gap compensation
- Radial compensation with segments
- Suction and pressure port radial
- Field of application: Industrial hydraulic
- Low noise
- Long time life
- Low pulsation (pressure pulsation ~2 %)
- Multi flow combinations

Technical Data:

Pump noise* (measured in sound chamber) dB[A]	53	54	55	57	58	59	60	61	62	63

n = 1.450 min⁻¹ Δ p = 250 bar T = 50 °C Medium: HLP 46 Bruggler value min. 30N/mm² recommended 50N/mm² for servo applications

* Measured in anechoic room of Eckerle Hydraulic Division; Axial microphone distance 1.0 m

** For acceptable pressure at 400-1.800 rpm. Further rpm on request.

*** Due to manufacturing tolerances the displacement volume could vary.

**** 1 1/2" suction port

The pumps have no corrosion protection.

The max. permissible values must not be applied cumulatively. Please contact us.

Internal gear pump

Type EIPH3 high pressure pump

with constant displacement volume

EIPH3

Characteristics

The series EIPH were developed particularly for the high requirements of industrial hydraulics. Their favourable noise characteristic, extremely low delivery and pressure pulsation, outstanding efficiency within broad revolution and viscosity ranges, have firmly established gap-compensated high pressure internal gear pumps among high pressure pumps. Simple combinability to multiple pumps with separate or common inlet is given.

The EIPH is a consistent advancement that already for over 40 years in the industry used gap-compensated internal gear pump technology, System Eckerle.

The single pumps of a multiple pump assembly are internally connected, even if you connect to the pump inlet. It is therefore no operating with different fluids possible.

Rated size 019, 022, 025 also available with oversized suction port.

Pump with SAE-D2-bolt flange and straight keyed shaft

Order example: EIPH6-___RK23-1X

Special version number

Tailor made design - No standard

Revision code

1st number: Change of external dimensions

2nd number: Internal modifications

Intake and outlet connection - with metric threads

3: According to SAE J 518 - Code 61 / 62

6: According to SAE J 518 - Code 61 / 62 with oversized suction port for variable speed drives

0: suction port closed; common inlet

- other flanges on request -

Mounting flange

0: SAE/A 2-bolt flange, centring collar Ø 82,55 at EIPH2

2: SAE/B 2-bolt flange, centring collar Ø 101,6 at EIPH2/3

2: SAE/C 2-bolt flange, centring collar Ø 127,0 at EIPH5

2: SAE/D 2-bolt flange, centring collar Ø 152,4 at EIPH6

3: Direct mounting

5: VDMA flange on request

- other flanges on request

Shaft end

A: straight keyed shaft

K: straight keyed shaft with PTO

B: SAE splined shaft end

L: SAE splined shaft end with PTO

P: SAE splined shaft end on both sides*

Rotation direction

R: Clockwise (S: CW size 5/3 I T: CW size 5/2)

L: counterclockwise

Rated size

Three digits

Frame size

2, 3, 5 or 6

Type

H: High pressure pump

Eckerle internal gear pump

*Secondary pump section - not usable as single pump

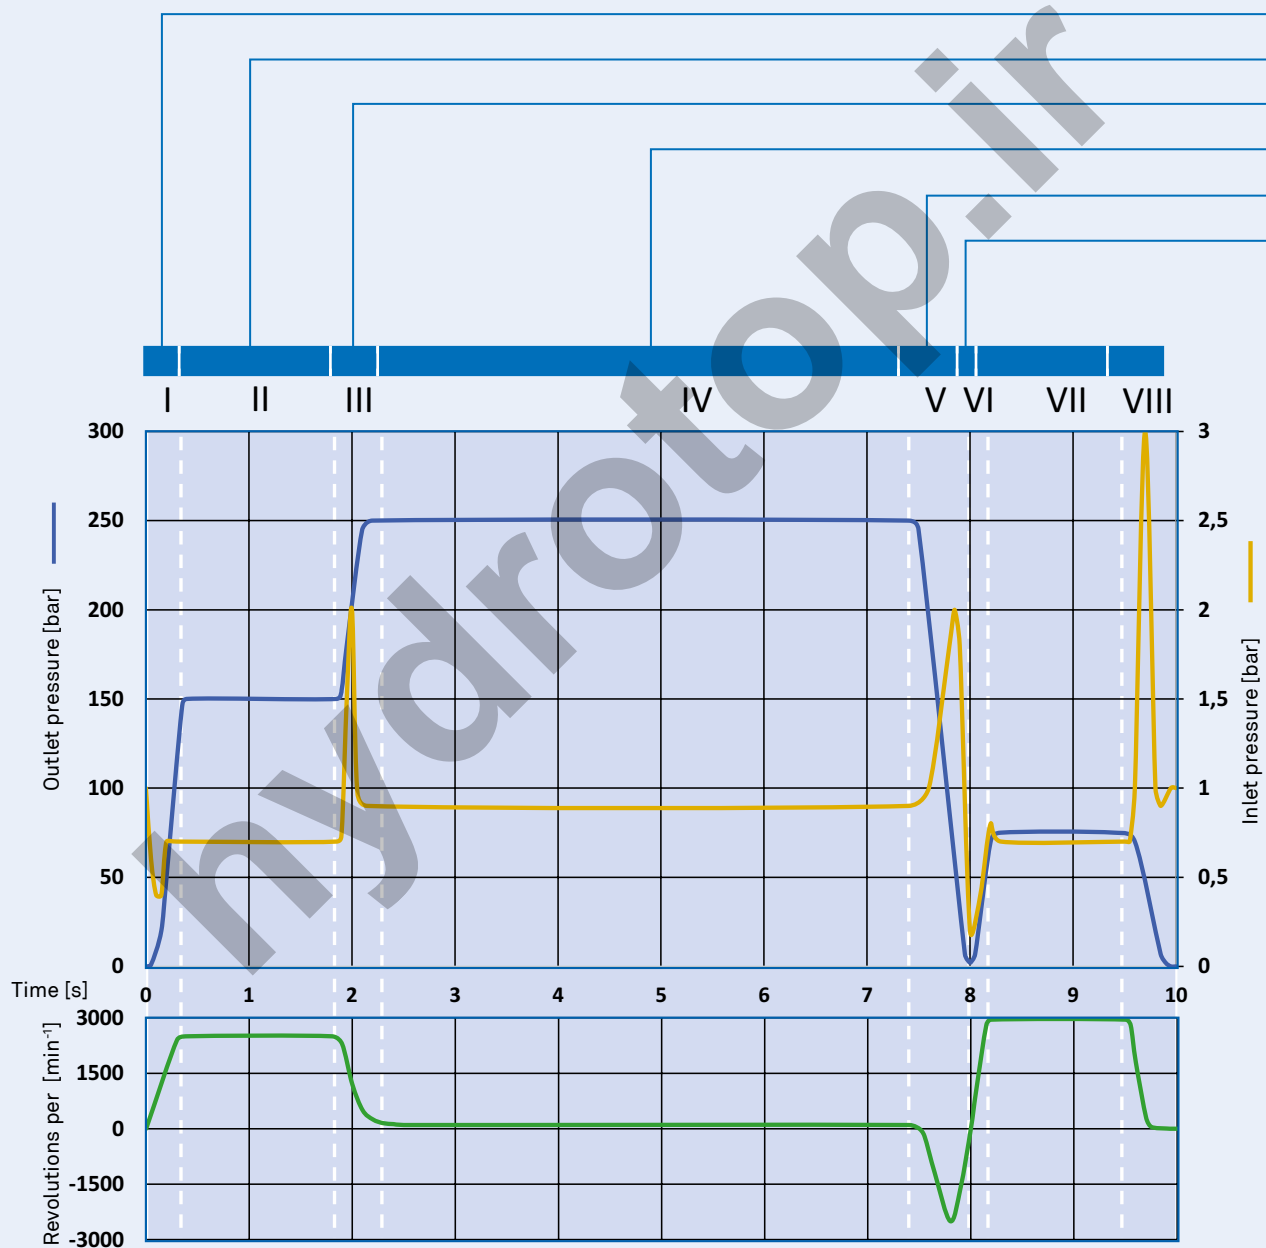

Order example
EIPH2-016RK03-1X

High pressure pump, frame size 2 with 15,8 cm³/rev, clockwise rotation, straight keyed shaft with PTO, SAE/B2-bolt flange connection, SAE type suction and pressure port, revision code 1X

Variable-speed operation

As a matter of principle, Eckerle internal gear pumps are eminently suited for variable speed operation. Even at low viscosities and high temperatures of the pumping medium, the pumps run extremely energy efficiently and highly dynamically over a wide speed range due to the radial and axial gap compensation.

However, with variable speed operation certain boundary conditions should be observed. The exemplary cycle shown below illustrates this clearly.

I. Start:

Eckerle internal gear pumps are able to build up pressure from standstill. This happens smoothly when the pump starts from an unpressurized state. Please talk to Eckerle, if due to the system design the pump is pressurized at standstill.

II. + VII. Pump operation:

Eckerle internal gear pumps are capable of providing a speed-dependent volumetric flow at any pressure level during pump operation. However, application limits of the respective sizes must be observed.²⁾

III. + VIII. Deceleration:

With Eckerle internal gear pumps very high decelerations can be achieved. It must be ensured though that line-dependent pressure peaks can develop within the suction side. These should not exceed the maximum permissible inlet pressure.^{2) 3)}

IV. Pressure Holding Operation:

Eckerle internal gear pumps are able to build up high pressures even at very low speeds due to the gap compensation. Hold pressure operation is thus extremely energy-efficient. Pump operation should follow after the hold pressure operation to flush out the pump.

V. Reverse operation:

Eckerle internal gear pumps are usually able to run highly dynamically in the opposite direction of rotation in order to lower pressure peaks, or by means of a hydraulic motor. However, it must be ensured that the output pressure is always higher than the input pressure.^{1) 3)}

VI. Acceleration:

With Eckerle internal gear pumps very large speed-ups can be run. These are limited by inlet pressure, geometry of the suction line and viscosity. However, these may not drop below the specified minimum inlet pressure of the series.^{1) 3)}

1) See Characteristics

2) See Technical data

3) To avoid critical operating points, we recommend taking measurements of the pump's inlet and outlet pressure near the pump with a scanning rate of at least 1 kHz when a new pump cycle starts.

Volume flow

Level of efficiency

Driving power

Sound level pressure in air

Measurement conditions: Speed 1450 min⁻¹, viscosity 46 mm²/s, operating temperature 40°C
