2.2

Directional seated valves type VP 1

zero leakage, intended for general hydraulic applications and grease lubing systems

Flow Q_{max} = 15 lpm Operation pressure p_{max} = 400 bar

Individual valve

Individual valve with connection block for pipe connection

1. General information

The valves type VP 1 are zero leakage, seated cone valves available as 2/2-, 3/2- and 4/2-way directional valves.

The internal pressure balance enables an arbitrary flow direction and maximum pressure for all ports.

The essential internal parts operate maintenance-free in the medium and are hardened and ground.

The actuation is separated from the hydraulic fluid, therefore any interaction between control elements and the pressure fluid is prevented, i.e. a temperature dependant fluid viscosity won't harm the movement of the control elements, side effect is that gumming due to excessive fluid temperature is prevented.

Gumming or sticking caused by higher temperature cannot occur.

The individual manifold mounting valves (2/2- and 3/2-way functions) feature the same connection hole pattern and actuation as the directional valves sizes 1 acc. to D 7300, i.e. all connection blocks and actuations listed there may be utilized.

Main field of application for these valves are lube systems especially when lubricants with high viscosity e.g. oil or grease are used. Any other fluid with similar viscosity may be suited as well, as long as it is compatible with the seal material.

Note: Observe restriction, when outside use is intended. The valve has to be protected from intruding moisture.

the reflow might be higher than the inflow.

Pressure fluid Hydraulic oil conf. DIN 51524 part 1 to 3: ISO VG 10 to 68 conf. DIN 51519

Viscosity limits: min. approx. 4, max. approx. 800 mm²/s

Optimal operation: approx. 10 ... 200 mm²/s

Also suitable for biological degradable pressure fluids types HEPG (Polyalkylenglycol) and

HEES (Synth, Ester) at service temperatures up to approx. +70 °C

Grease, based on mineral or synthetic oils, with NLGI-classification 000 ... 2 acc. to DIN 51818

up to operation temperature of approx. +70°C.

Ambient: approx. -40 ... +80 C; Fluid: -25 ... +80°C, Note the viscosity range Temperature range

Restriction for version with ex-proof solenoid:

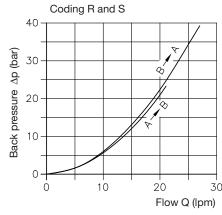

Ambient: -35 ... +40°C; Fluid: max. 70°C

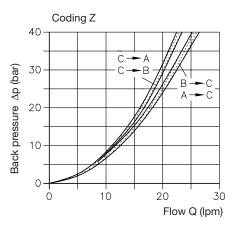

Permissible temperature during start: -40°C (observe start-viscosity!), as long as the service temperature is at least 20K higher for the following operation

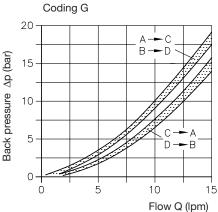

Biological degradable pressure fluids: Observe manufacturer's specifications. Considering the compatibility with seal material not over +70 °C.

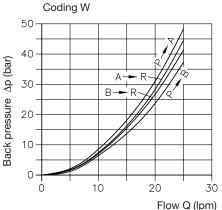

Attention: Observe the restrictions regarding the perm. duty cycles of the solenoids in sect. 2.2.1!

Δp-Q curves (guideline)

Fluid viscosity during tests approx.. 60 mm²/s

2.2 Actuation modes

Relative duty cycle during operation (100% ED stamping on the solenoid)

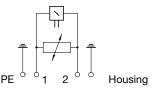

Curves in the margin apply only to non neighboring valves!

Loovers should be provided when these valves are installed in control cabinets! General rule for valve banks and ambient temperature above 40°C: It is advisable to locate at least one unactuated valve between valves actuated simultaneously or for longer periods. Otherwise neighboring valves would hinder heat dissipation and heat each other up.

Continuous operation

Relative duty cycle

$$t_r = \frac{t_{on}}{T} \cdot 100(\%ED)$$

Note:

Only 40 % ED are permissible if the valves are neighboring, it is additionally recommended that neighboring valves are not actuated simultaneously. Electrical data for explosion-proof solenoids

Relative duty cycle %ED-5 min

Restrictions for use:

Ambient temperature $-35 \dots +40^{\circ}\text{C}$ max. fluid temperature $+70^{\circ}\text{C}$ el. protection against overload (conf. IEC 60127) $I_{\text{F}} < 1.6\text{-A-T}$

Surface coating

Housing galvanically zinc coated

Coil and connection cavity are moulded

Electrical connection 3x0.5 mm²

Cable length 3 m, Option 10 m (cable ÖLFLEX-440P ®

Co. LAPP, D-70565 Stuttgart)

 Only with adaptor, see sect. 2, table 2. **Attention :** Protect the complete valve against direct sun light. Observe the operation manuals B 03/2004 and B ATEX!

Electrical lay-out and testing conforming EN 60079, VDE 0170-1, VDE 0170-5

Special voltage

The table below lists all voltage available incl. the one listed on page 2.

VP1 - R - G 48 Examples:

VP 1 - Z - X 110 VP 1 - W - WG 200

The specified power ratings are only guide line figures, they may vary slightly depending on voltage and manufacturer. The cold current can be calculated: $I_{20} = P_N/U_N$ (see examples)

G 220	GM 230			

Notes to the lay-out:

DC-voltage:

The voltage specification (solenoid lay-out) shall correspond to the actual supply voltage (perm. tolerance ± 5...10%).

A reduced voltage leads to reduced solenoid force, an exceeded voltage causes an unpermissible solenoid heat built-up.

AC-voltage:

The voltage specification shall correspond to the actual supply voltage (50/60 Hz).

The solenoid DC-voltage is approx. 0.9 U_{AC}-2V because of the utilized rectifier plug. The table above lists the corresponding DC-solenoids for various AC supply voltage (e.g. for 110V AC 50 Hz, solenoid with $U_N = 98V DC \triangle stamping on the solenoid!).$

2.2.2 **Further actuation modes**

Hydraulic (coding H) The actuation element is a single acting control piston with spring return.

The switching position is maintained as long as the control pressure is applied. The valve will return automatically to its idle position (0) when the control pressure is removed.

The control piston is sealed and shows zero leakage.

Means of control

Control pressure max = 700 barmin = 12 bar

Control displacement 0.4 cm³

Temperature -40 ... +80°C (ambient and control fluid)

Pneumatic The actuation element is a single acting control piston with spring return. (coding P)

The switching position is maintained as long as the control pressure is applied. The valve will

return automatically to its idle position 0 when the control pressure is removed.

The control piston is sealed and shows zero leakage.

Compessed air, lubed and filtered Means of control

Control pressure max =15 bar min = 4 bar

Control displacement 1.0 cm³

-20 ... +70°C (ambient and compressed air) Temperature

Mechanic

(coding K and T) The actuation element is a pin with spring return. This pin is either directly actuated or via lever with roller following a cam. Switching position a of the valve is achieved when the pin is pressed

down (see dimensional drawing sect. 3.2).

Actuation force = 25 ... 28 N (coding K)

= 51 ... 57 N (coding T)

Actuation travel see dimensional drawing sect. 3.2

Manual (coding F) The actuation element is a lever acting on a pin with spring return. Switching position a of the valve

is achieved when the pin is pressed down.

Actuation force = 25 ... 28 N

Actuation travel see dimensional drawing sect. 3.2

Actuation with detent. The achieved switching position a or 0 changes with every 90° turn, no (coding D)

matter of the rotation direction.

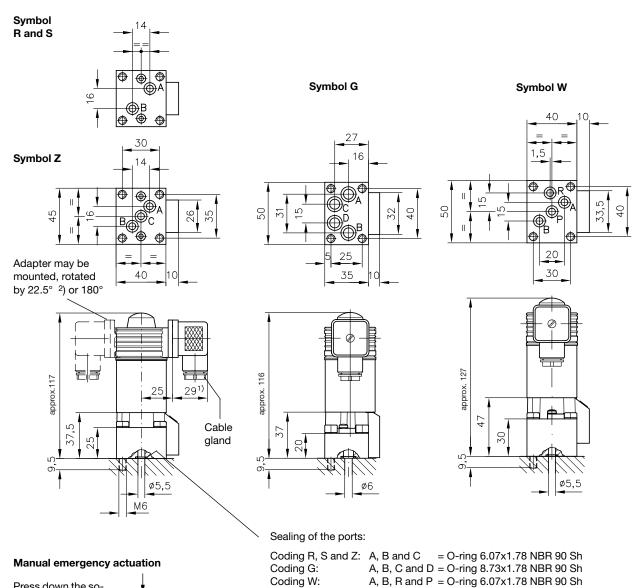

Actuation torque = 63 Ncm

Actuation travel see dimensional drawing sect. 3.2

3. Unit dimensions

All dimensions in mm, subject to change without notice!

3.1 Valve (illustration with solenoid actuation)

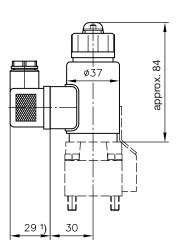

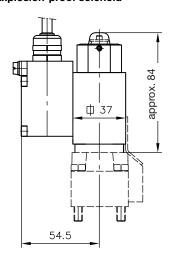

Press down the solenoid pin hidden under the rubber cap, max. actuation force 80 (N)

Versions with replaceable coil

Explosion-proof solenoid

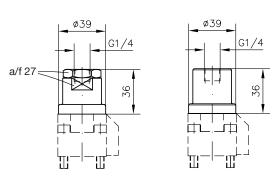

- This dimension depends on the manufacturer and may be up to 11 mm longer acc. to DIN EN 175 301-803 A.
- Not all angled positions are possible, when the valves are neighboring
